# FERTILISER PRODUCT SHEET

## POLYSULPHATE

- Derived from the naturally occurring mineral Polyhalite
  - Nutrient Concentration **11K 48SO<sub>3</sub> 6MgO 17CaO**
  - Granulometry **2 – 4 mm**
  - Up to 36m spread pattern
  - Country of Origin **U.K**
  - Prolonged release of Sulphur

Sulphate is released from Polysulphate for about 50 days, all sulphate from Ammonium Sulphate is released in 5-6 days, which means reduced risk of leaching and better uptake by the crop

- All nutrients fully soluble
- Low chloride, useful for vegetable crops
- Neutral pH, will not acidify the soil as Ammonium Sulphate does
